Date: February 1, 1963

POSITRACTION AXLES

When ordering Corvettes with standard 250 h.p or 300 h.p engines on which a 3.08 to 1 positraction axle ratio is required, it will be necessary to indicate on the order form both options G81 and G91. This will not change the price of the option, but is required by the St. Louis Assembly Plant to assure it's being included on the unit.

Very truly yours

J.W. Mulkin, Jr.
