## 1955 Corvette: Service Bulletin: Specification Sheets for the Adjustment and Parts Sizes for the Four Barrel Carburetor

**Subject:** Specification Sheets for the Adjustment and Parts Sizes for the

Four Barrel Carburetor

**Model and Year:** 1955 Chevrolet Eight Cylinder Two Barrel Carburetor

Source: Chevrolet Service Bulletin - Zone #13 - Pittsburgh, PA

Bulletin No: S&M- 55-25

**Date:** July 5, 1955

TO: ALL DEALERS

## ATTENTION: SERVICE MANAGER

Attached please find a copy of the specification sheets for the adjustment parts sizes for the four barrel carburetor that we are currently using in production in our V-8 engines.

We would like to suggest that this be reviewed by the mechanics in your organization, together with the Top release 55-25 - S&M "Servicing the 1955 Chevrolet Eight Cylinder Two Barrel Carburetor", and Top 55-26 - S&M entitled "Servicing the 1955 Chevrolet Eight Cylinder Four Barrel Carburetor".

The tools, that will be necessary to adjust the four barrel carburetor, were included in your last essential tool order under the number J-6040.

We believe that this will help to clarify servicing the Four Barrel Carburetor and insure your owners peek performance in engine tune-up.

Optional Equipment (180 Horsepower)

CHEVROLET "V-8" 1955

Casting No. 1063 on face of flange

WCFB Four-Bore Down-Draft Climatic® Control Carbureter No. 2218S

## CARBURETER SPECIFICATIONS

For Chevrolet 8 Cylinder Engine: 33/4 Inch Bore, 3 Inch Stroke

Dimensions: Flange size, 11/8 inch. Four Bore—4 bolt type. Primary venturi size, 11/32 inch 1. D. Main venturi (primary) size, 1-1/16 inch. Main venturi (secondary) size, 15/16 inch 1. D.

Float Level: See adjustments.

Vents: Outside, none. Inside, (2) on primary side, (3) on secondary side.

Gasoline Intake: Size No. 42 (.0935 inch) drill hole in needle seat.

Low Speed Jet Tube: (Primary side only). Jet, size No. 68 (.031 inch) drill. By-Pass, in body, size No. 52 (.0635 inch) drill. Economizer, in screw plug, size (.049 inch) diameter. Idle Bleed, in body, size No. 52 (.0635 inch) drill.

Idle Port: (Upper) slot type. Primary, length .174 inch; width .040 inch. Secondary, none.

Idle Port Opening: Primary, .113 to .119 inch above top edge of valve with valve tightly closed. Secondary, none.

Lower Port: Primary (for idle adjustment screw), size No. 53 (.0595 inch) drill. Secondary, none.

Set Idle Adjustment Screw: 1/4 to 11/4 turns open. For richer mix-ture turn screw out. Do not idle engine below 400 r.p.m. (Automatic Trensmission—in Drive Range), 450 r.p.m. (Standard and Overdrive Transmission).

Main Nozzle: Installed permanently. DO NOT REMOVE. Antipercolating jet (primary, in plug) size Nc. 60 (.040 inch) drill, (secondary, in body) size No. 60 (.040 inch) drill.

Metering Rod: Primary, economy step .071 inch diameter. Mid-dle step tapers to .065 inch diameter. Power step, .055 inch diameter. Secondary, none.

Metering Rod Jet: Primary, size .091 inch diameter (for metering rod).

Secondary, size .0512 inch diameter (no metering rod).

Metering Rod Setting: See adjustments.

Accelerating Pump: Discharge jet (twin) primary side only, size No. 73 (.024 inch) drill.

Intake ball check seat, size .115 to .120 inch diameter. Discharge needle seat, size .070 inch diame'er.

Pump Adjustment: See adjustments.

Choke: Carter Climatic Control, set on index. Butterfly type -offset choke valve, primary side only. Choke heat suction hole, restriction in piston housing, size No. 42 (.089 inch) drill.

Vacuum Spark Port: Horizontal slot (round and) .045 x .110 inch. Top of port .018 to .028 inch above valve with valve tightly closed.

## Motor Tune-Up-Be Accurate! Always Use Feeler Gauges!

CAUTION: Change worn or leaky flange gaskets. Tighten manifold bolts and test compression before adjusting carbureter.

Gap .035"

Breaker Point Setting .016"-.019"

Ignition Timing Breaker Points to Open: 4° B.T.C.

Valve Setting (Hot) Std. and O'drive Trans. Intake .006" Exhaust .016"

Float Setting See Adjustments

Idle Adjustment Screw Setting 1/4 to 11/4 Turns Open

NOTE: Power Glide Trans. equipped with hydraulic valves—no adjustment necessary.

## CARBURETER ADJUSTMENTS

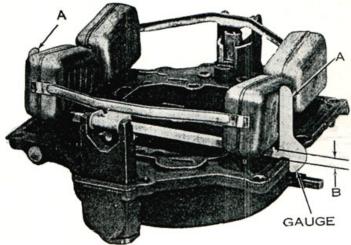

Figure I Float Adjustment

## FLOAT ADJUSTMENT (Fig. 1):

Two separate float adjustments must be made—lateral and vertical.

LATERAL ADJUSTMENT: With bowl cover assembly inverted, bowl cover gasket removed and float resting on seated needle, place float gauge directly under center of floats with notched portion of gauge fitted over edge of casting. Side of floats should just clear the vertical uprights of float gauge (A). Adjustment should be made by bending arms of floats.

VERTICAL ADJUSTMENT: With float gauge in same position floats should just clear the horizontal parties of gauge. Vertical distance (β) between top of float and machined surface of casting must be V<sub>θ</sub> inch (gauge T100-232) for primary floats and V<sub>4</sub> inch (gauge T107-223) for secondary floats. Adjust by bending float arms.

FLAT ON PUMP ARM

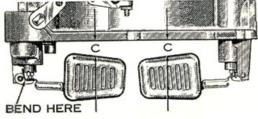

Figure 2 Float Drop Adjustment

## FLOAT DROP ADJUSTMENT (Fig. 2):

With bowl cover held in upright position and measuring from center of float, the distance between top of floats (C) and bowl cover should be % inch for primary floats and ¾ inch for secondary floats. Adjust by bending stop tabs on float brackets.

## PUMP ADJUSTMENT (Fig. 3):

Install pump connector link in outer hole (long stroke) of pump arm, with ends extending toward countershaft arm. Back out throttle lever stop screw (D) until throttle valves seet in bores of carbureter. Hold straight edge across top of dust cover boss at pump arm. The flat on top of pump arm should be parallel to straight edge. Adjust by bending throttle connector rod at lower angle. (Use tool T109-213.)

## STRAIGHT EDGE BENDING TOOL

Figure 3 Pump Adjustment

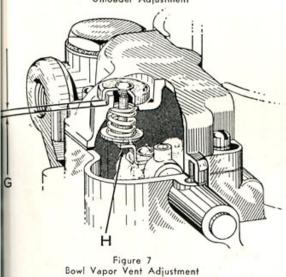

# AUGE

Figure 6 Unloader Adjustment

WL VAPOR VENT ADJUSTMENT (Fig. 7):
his adjustment should be made after completing pump and
netering rod adjustments. Install dust cover and dust cover asket. Back out throttle lever stop screw to allow throttle alves to seat in bores of carbureter. There should be 1/16 ch (G) (gauge T109-197) between lower edge of bowl apor vent valve and dust cover. To adjust, remove dust cover and bend vapor vent arm (H).

## UNLOADER ADJUSTMENT (Fig. 6):

With throttle wide open there should be 3/16 inch (gauge T109-28) clearance between upper edge of choke valve and inner wall of air horn. Adjust by bending unloader lip on throt:le shaft lever (use bending tool T109-41).

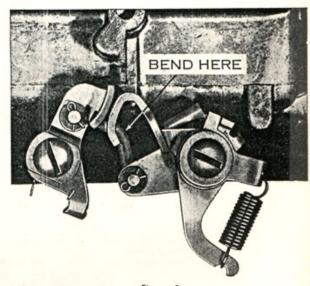

Figure 8 Secondary Throttle Lever Adjustment

## SECONDARY THROTTLE LEVER ADJUSTMENT (Fig. 8):

Primary and secondary throttle valves should reach wide open position at the same time. To adjust, bend throttle operating rod at upper angle. (Use bending tool T109-213.)

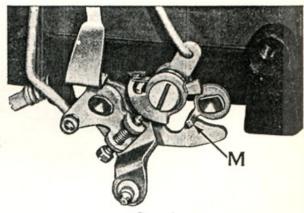

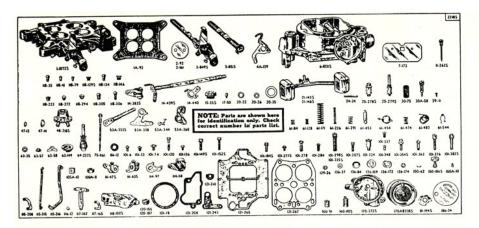

Figure 9 Secondary Throttle Lock-Out Adjustment

## SECONDARY THROTTLE LOCK-OUT ADJUSTMENT (Fig. 9):

This adjustment should be made after completing fast idle and secondary throttle lever adjustments. Crack throttle valves and hold choke valve tightly closed. Then close throttle. Tang (M) on secondary throttle lever should freely engage in notch of lock-out dog. If necessary to adjust, bend tang (M) on secondary throttle lever.

## Chevrolet "V-8"-1955-Carbureter No. 2218S

WHEN SERVICING, USE GASKET ASSORTMENT No. 261; REPAIR PACKAGE No. 1784

PART NAMES IN CAPITAL LETTERS, LISTED BELOW, INDICATE CONTENTS OF REPAIR PACKAGE

PART NAME Body flange assembly	Part No. 47-13	PART NAME Welsh plug (spark port)
