

1957 Corvette: Service Bulletin: Effect of Solvents on Lucite Acrylic Lacquer Finish

Model Year: 1957

Subject: Effect of Solvents on Lucite Acrylic Lacquer Finish

Source: Chevrolet Dealer Service Technical Bulletin

Number: DR #261, Section I

Date: October 1, 1956

TO: ALL CHEVROLET DEALERS

Extreme care must be used in selecting the proper solvent for removing road oil or tar from the surface of Lucity Acrylic Lacquer Finished. The majority of solvents available at the present time are injurious to this type of paint.

Engineering is revising the card which is placed in the glove compartment concerning the care of Lucity Acrylic Lacquer Finished to include the following information:

"To remove tar and road oil from Lucite Acrylic Lacquer Finish, it is important that a remover be used which is adapted to this purpose such as **Dupont Dissolvo** or **equivalent**."

"Any tar and road oil remover used should indicate on the label that it is harmless to Lucite Acrylic Lacquer."
